

Ecoheat is a range of low wattage immersion heaters especially designed for use with Solar panel and Marine installations.

eCOHeat

This product is designed especially to run on surplus power generated by Solar panels thus providing an alternative cost free water heating solution.

This range is available from stock and is designed to fit all of the most popular vented and unvented water heating cylinders with fittings in both 1 3/4" and 2 1/4" BSP.

Ecoheat is available in 1kw, 1.5kw & 2kw loadings and immersed lengths of 11" (270mm), 14" (340mm) & 27" (670mm).

All of the heaters are fitted with a dual function thermostat providing control of the water temperature and over temperature protection of the water cylinder.

Compliant with BS EN 60335-2-73 these heaters are also suitable for marine application.

The range is complimented by the availability of built to order heaters available in a range of head sizes that include 1 1/4", 1 1/2", 2" & 2 1/2" BSP head sizes and a range of bespoke lengths and loadings to suit almost any application.

We believe this provides the most comprehensive range of renewable heaters available today.

Website prices are for quantities up to 4 off please contact us for larger quantity prices.
